DETAILED ACTION

This action is responsive to the amendment filed 12-22-2005, which has been entered.

Claims 1-17 and 28-29 are allowed.

Election/Restrictions

1. Claim 1 is generic and allowable. Accordingly, the restriction requirement as to the encompassed species is hereby withdrawn and claims 6-17, directed to the species of the non-elected species no longer withdrawn from consideration since all of the claims to this species depend from and otherwise include each of the limitations of the allowed generic claim. However, claims 18-27, directed to the species of the non-elected species remain withdrawn from consideration since they do not depend upon or otherwise include all the limitations of an allowed generic claim as required by 37 CFR 1.141.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Charles R. Watts on February 2, 2006.

The application has been amended as follows:

The following changes have been made to the claims to correct indefinite problems.

In claim 6, line 7, "an" has been changed to --the-- prior to "end".

In claim 9, line 7, "an" has been changed to --the-- prior to "end".

In claim 12, line 7, "an" has been changed to --the-- prior to "end".

In claim 14, line 7, "an" has been changed to --the-- prior to "end".

Claims 18-27 have been canceled because they are directed to a non-elected invention and do not depend from nor include the limitations of the allowable generic claim.

Reasons for Allowance

3. The following is an examiner's statement of reasons for allowance: the prior art fails to anticipate or render obvious the combination of a piston rod detecting mechanism for detecting movement of a piston rod, an most significantly, requires a piston connected to a piston that is slidably mounted in a cylinder, a flange provided on the piston rod opposite a detecting coil such that movement of the flange with the rod relative to the detecting coil causes a change in inductance in the magnetic circuit causes an output signal from the coil, wherein a detecting circuit is position to detect the output signal as to detect position of the piston based on the output signal.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marcus Charles whose telephone number is (571) 272-7101. The examiner can normally be reached on Monday-Thursday 7:30 am to 6:00 pm.
